CA-M (Network) Assignment - 2

Real-world Application of parallel computing
Application - weather forecasting systems
parallel computing use

- speed up image reconstruction and analysis by processing multiple image simultaneously.
- uses multiple processors / cores for better diagnosis.

Network System use

- connects diagnostic machines with hospital server and doctor.
- Enables real-time sharing of reports images and remote consultations.

Importance

- Ensures quick, accurate and life-saving diagnosis.
- Provide better access to patient data and AI-based analysis.
