

SDLC - Assignment - 1

SDLC Overview Infographic Outline

The SDLC is a structured process to develop high-quality software through distinct phases,

1) Requirements

Understand customer needs to set clear expectations.

Importance - Prevents costly misunderstandings.

2) Design

Create system architecture and blueprints.

Importance - Guides developers and reduces errors.

3) Implementation

Develop the actual software by coding.

Importance - Turns plans into a working product.

4) Testing

Validate functionality and find bugs.

Importance - Ensures software quality.

5) Deployment

Launch the software for end-users.

Importance - Makes the solutions operational.

Interconnection

Phases flow sequentially with feedback loops, Agile models revisit phases iteratively.
